

Environmental Policy

Our mission is to be an internationally competitive industrial research institute that contributes to sustainable growth in Sweden by strengthening competitiveness and innovation in both society and business. Environmental issues are central to our sustainability work and we continually strive to reduce our own environmental impact and to help reducing the environmental impact of society and our customers. We shall...:

- Use our research and our services to promote a development that benefits the environment, humankind and the economy
- Participate in active and future-oriented research on environmental issues
- Increase our focus on the sustainability aspects of our applications and tenders with the help of sustainability declarations
- Reduce the environmental impact of our own operations by:
 - Optimising our resource use
 - Reducing our climate impact from energy use, consumption and business travel
 - Preventing pollution in the shape of emissions and waste
 - Increasing the use of renewable resources and promoting a transition to a circular economy
 - Considering the environmental impact of all purchasing
 - Handling hazardous substances safely
- Comply with the legal and other binding requirements affecting our operations as regards the environment
- Continually improve our environmental work and our environmental performance and optimise our environmental management system
- Leverage, include and develop the expertise of our employees and other relevant stakeholders as regards the environment
