Upscaling of Nanoparticle Production

Focus Industries:

- Food and Pharma, MedTech, Cosmetics, Specialty Chemicals, Energy, Automotive and Mining, and Water treatment
- Product development from raw materials to final product manufacture

Consultancy on scale ups, chemical process development and chemical manufacturing processes for both powder and dispersions.

From lab to pilot scale

- Chemical processes
- Design and development

The challenges to create sustainable chemical processes are many! We have solutions providing green and sustainable manufacturing processes.

From batch to continuous process

- Advanced unit operations for separation processes
- High temperature and pressure chemistry
- Process safety and technoeconomic calculations

Our expertise in chemical route design and process development provides an opportunity to bring ideas from the laboratory to commercial application.
