STeP by OEKO-TEX®

Internal Assessment—STeP without certification

Find out how your company performs based on sustainable and secure production and social responsibility, without certifying your production!

As a producing company (manufacturers of yarn, fabric, nonwoven, knitted fabrics, foam, accessories, sewing and dyeing & finishing) there is the opportunity to apply for access to the assessment tool for STeP certification with the goal of conducting an internal self-assessment against the requirements of STeP by OEKO-TEX®.

• Complete the application documents online at OEKO-TEX® websida (www.oeko-tex.com) and confirm “Terms of use”
• Answers the questions in the electronic questionnaire
• RISE IVF analyzes and evaluates the answers
• RISE IVF issues a status report describing how you perform in relation to meeting the requirements of STeP by OEKO-TEX®.

STeP by OEKO-TEX® Internal Assessment is a theoretical assessment tool. The status report does not include the right to use the STeP by OEKO-TEX® trademark for external communication purposes or marketing activities.

The difference compared to a complete STeP certification is exclusion of ON-SITE Visit and evaluation of the same, verification on site of stated answers in the questionnaire and certificate. If you extend to a STeP certification within 12 months from receiving the status report, you will be credited with the cost of an Internal Assessment.

STeP stands for Sustainable Textile & Leather Production and is an independent Certification system for environmentally friendly and socially responsible production facilities within Textile and Leather production, along the entire production chain. The goal of STeP from OEKO-TEX® is to continuously improve production conditions and health and safety aspects in all areas

Includes requirements for:

- Quality management
- Environmental management
- Chemical management
- Health & Safety
- Environmental performance
- Social responsibility
