Detailed program ISO 14001:2018

Content

• We make an approach and go through the red thread of the standard with a systematic way of working; to understand and work with the work environment from strategy to operational activities.
• We go through the detailed activities in the process/work method, in which order they are carried out in order to create systematics in the work environment management;
• We go through the procedure for how the integration of strategic work environment work is handled, from strategy, risk/opportunity analyzes to target work, action plans, etc.
• We go through for operational level, how to navigate around risk/opportunity analyses, audits, safety rounds, consultation meetings, safety committees, etc. All of those, activities that can be included in the process.
• We go through how to investigate, revise and analyze the work environment, how to compile the results from this and take them in to actions and create value in action, as well as systematically follow up and take measures to develop the work environment, as an integrated part of the business, with all requirements and needs; both those that coincide and those that may be contradictory.
• We go through who is responsible for what; which roles need to be involved in the work environment work.
• We go through what needs to be communicated about the work environment, both internally and externally, before, during and after completed activities.
• We go through a more comprehensive insight into how you can communicate to create commitment and renewal with the work environment and sustainability in focus.
• We go through and talk to a certain extent about pedagogy and psychology around how we meet people, based on your needs/interests.

Purpose

• We make an approach and go through the red thread of the standard with a systematic way of working; to understand and work with the work environment from strategy to operational activities.
• We go through the detailed activities in the process/work method, in which order they are carried out in order to create systematics in the work environment management;
• We go through the procedure for how the integration of strategic work environment work is handled, from strategy, risk/opportunity analyzes to target work, action plans, etc.
• We go through for operational level, how to navigate around risk/opportunity analyses, audits, safety rounds, consultation meetings, safety committees, etc. All of those, activities that can be included in the process.
• We go through how to investigate, revise and analyze the work environment, how to compile the results from this and take them in to actions and create value in action, as well as systematically follow up and take measures to develop the work environment, as an integrated part of the business, with all requirements and needs; both those that coincide and those that may be contradictory.
• We go through who is responsible for what; which roles need to be involved in the work environment work.
• We go through what needs to be communicated about the work environment, both internally and externally, before, during and after completed activities.
• We go through a more comprehensive insight into how you can communicate to create commitment and renewal with the work environment and sustainability in focus.
• We go through and talk to a certain extent about pedagogy and psychology around how we meet people, based on your needs/interests.

**Method**

We start from the structure and model of the standard PDCA, Plan, Do, Check, Act.

• We start with general education about standards to understand the context of standards and society and how to use management system standards as a tool in your business management.
• We continue with prerequisites for an organization, how to plan to carry out work environment work; what you need to have in terms of knowledge and tools and what you need to think about. We alternate with discussion and analyzes based on your questions and needs.
• We then proceed with how to carry out the work environment work operationally; methods, tools and pedagogy. We weave in both ethical social as well as purely economic and ecological connections to include all sustainability perspectives.
• We learn how to compile and deliver the results of work environment initiatives and how to take it further into concrete action and development; through an effective systematic process.
• Finally, we also go through how we follow up on the work environment work based on the standard model, with decision-making forums and responsibilities, powers and how the red thread is connected and forms the framework for what is a constantly ongoing development process for work environment.

**Delivery**

You get the prerequisites to interpret and understand the standard, its requirements and how you can fulfill them in line with your business operations. You will bring with you clear models, effective and concrete knowledge that will benefit the entire organization, both strategically and operationally; as well as for Your internal as Your external stakeholders. You get the conditions to create self-confidence in the organization in how you build a systematic work environment that is both stable and flexible and provides the conditions to create a competent and sustainable organization. Finally, you will also be able to connect this knowledge to your work with sustainable development and renewal through the connection to the sustainability goals and a sustainable transition. This is a business benefit for your organization and an opportunity to contribute to social development.
